Overview

This guide explains, step by step, how to use the Supplier Management System day to day. It follows the application's left-hand navigation, one area per section. Use the Table des matières above to jump straight to a topic, and the quick-find table below to locate a feature by keyword.

Quick find — where each feature lives

Section	What it covers · quick find
1 · Supplier Lifecycle	Create a new supplier (New Supplier Master wizard) and manage existing ones — units, plant assignments, scope/owner, activate/deactivate (Group Management · SB9).
2 · Supplier Portfolio	Supplier Panel (SB1) with committee validation · Supplier Monitoring (missing-data gaps) · Development Plans (SB22) request→decision workflow.
3 · Evaluations	Certifications Tracker · Criteria Validity Tracker · Evaluation Scorecards (batch upload) · the Relation Evaluation Scorecard — Add / Update Evaluation (class, operational, decision & impact).
4 · Purchasing Value	Opportunities phase-gate pipeline (Phase 0–4) · Monthly Follow-up · Budgeting · Recovery Plans · KPIs dashboard · Action Plans.
5 · Administration & Approvals	Approver-only: Account Requests · Relation Review Queue · Supplier Validation Queue.
Appendix A · Getting Started & Access	Sign in · request an account · reset password · activate account.

Tip: to search the whole guide, press Ctrl+F in Word and type a screen name, button label or field (for example “Assign to Plant”, “development plan”, “override status”).

How to Read This Guide

This guide is written for end users — buyers, quality staff and supplier owners who use the application day to day. It follows a step-by-step, click-by-click style. You do not need any technical knowledge to follow it.

Conventions used

Notation	Meaning
Sidebar → A → B	A navigation path. Read it as: open the left sidebar, click A, then click B.
Bold text	The exact label of a button, field, tab or menu item as it appears on screen.
Asterisk (*)	A required field. The form will not let you continue until it is filled in correctly.

Callout boxes

TIP — Tip

A shortcut or good practice that makes a task faster or easier.

NOTE — Note

Useful background information or an explanation of what the application does.

IMPORTANT — Important

Something that has consequences — read it before you act (for example, an action that cannot be undone).

Where these features live

Everything in this volume is reached from the

- Supplier Lifecycle

group in the left navigation sidebar, which contains two entries:

- New Supplier Master
- Group Management (SB9)

1 Supplier Lifecycle

The Supplier Lifecycle is where a supplier first enters the system. It has two parts:

1. New Supplier Master — create a brand-new supplier (its group, its first unit, its contacts and its certifications).
2. Group Management (SB9) browse existing suppliers, edit them, and manage their units and the plants they are assigned to.

This section explains both, in the order you would normally use them.

1.1 New Supplier Master

Use this when you are onboarding a supplier that does not yet exist in the system. The screen is a five-step wizard. You move forward with Continue and backward with Previous; nothing is saved until you reach the last step and click Create Supplier Master.

What the wizard creates

NOTE — One master, four things at once

Creating a supplier master register, in a single operation: (1) the supplier group (the parent company), (2) its first unit (a physical site/plant of that supplier), (3) the group contacts, and (4) any quality certifications you enter. Assigning the unit to an Avocarbon plant and running the first evaluation happen afterwards, in Group Management (SB9) covered in section 1.2.

Opening the wizard

3. In the sidebar, open Supplier Lifecycle and click New Supplier Master.
4. Alternatively, from the Group Management (SB9) page, click the New supplier master button at the top right.

The “Create Supplier Master” screen on first open, showing the 5-step progress bar (Supplier Info · Contacts · Unit Location · Certifications · Review).

IMPORTANT — Unsaved progress

While you are filling in the wizard, an amber banner reminds you that your progress is not saved. If you try to leave the page, a “Leave without saving?” dialog appears. Choose Stay and continue to keep your data, or Leave and discard to abandon it. Data is only stored once you click Create Supplier Master on the final step.

Step 1 — Supplier Info (the group)

This describes the parent supplier company. Fields:

Field	Required	Type	Notes
Supplier Group Name *	Yes	Text	Legal or commercial group name, e.g. “Mersen Group”.
Scope *	Yes	Dropdown	Choose Local or Global.
Global Owner Email	If Global	Email	The default Avocarbon owner for all this group's relations. Required only when Scope = Global; leave blank for Local suppliers. Must be a valid email (name@avocarbon.com).

NOTE — Commodities are set later

There is no commodity field here. The group automatically inherits the combined set of commodities from its units, which you set on the next unit step.

Supplier Group Information
Parent entity — shared across all units

Supplier Group Name *

e.g., Mersen Group, Kemet Group

Legal or commercial group name

Scope *

Local

Select scope

Local

Global

Global Owner Email

name@avocarbon.com

Leave blank for local suppliers

Select the commodity for each unit in the next step; the group will automatically inherit the aggregated set from all its units.

Step 1 — Supplier Group Information, with the Scope dropdown open showing Local / Global.

Step 2 — Contacts (group contacts)

Add the key people at the supplier organization. You can add as many as you need with Add Another Contact; each card except the last can be removed with the red x.

Field	Required	Type	Notes
Full Name *	Yes	Text	e.g. "John Zhang".
Email *	Yes	Email	Must be a valid email address.
Phone	No	Text	Include the country code.
Role Label	No	Text	Short role, e.g. "Quality Manager".
Detailed Role Description	No	Text	Longer description of the role, if useful.
Primary Contact	—	Checkbox	The primary contact

Supplier Contacts
 Add key contacts from the supplier organization

+

< Previous

Continue >

At least one primary contact is required. They will receive the assessment template and prequalification

Step 2 — Supplier Contacts, showing one contact card with the Primary Contact checkbox ticked.

Step 3 — Unit Location (the first unit)

A unit is a physical plant or operating location belonging to the supplier group. Only the unit name is mandatory; everything else is optional but recommended.

Location and identification

Field	Required	Type	Notes
Unit Name *	Yes	Text	Unique identifier for this unit, e.g. "ACME-CN-001".
Street Address	No	Text	
City	No	Text	
Country	No	Dropdown	Pick from the country list (China, India, France, Germany, Morocco, Tunisia, ...).
Continent	No	Text	e.g. Asia, Europe.
Area / Region	No	Text	e.g. Greater China, Central Europe.
Website	No	Text	Supplier website URL.

Commodity and product classification

These describe what the unit supplies. Selecting one or more commodities filters the families that become available, and families in turn filter sub-families.

Field	Required	Type	Notes
Commodity	No	Multi-select (pills)	Click to toggle: Plastic and Stamping, Wire, Material, Electronics, Sintered Parts, Other.
Family	No	Multi-select	Product family; you can type to add a new one. Filtered by the chosen commodities.
Sub Family	No	Multi-select	Filtered by the chosen families. Select a family first.
Product Line	No	Multi-select	e.g. Assembly, Brush, Advanced Material, Seals, Chokes; custom values allowed.

Sustainability

Field	Required	Type	Notes
Carbon Footprint	No	Text (tCO ₂ e)	Annual carbon footprint.
Green Electricity	No	Number 0–100 (%)	Share of electricity from renewable sources.

Unit contacts

Separately from the group contacts, you can record contacts specific to this unit using Add contact. Full Name is required on any unit-contact card you start; email, phone and role are optional.

Field	Required	Type	Notes
Standard Type *	If row started	Dropdown	Quality, Environmental, Safety & Health, Energy, Other.
Certification *	If row started	Dropdown	Depends on Standard Type. e.g. Quality → IATF 16949:2016, ISO 9001, ISO 13485, ...
Certificate Name / Reference	No	Text	e.g. "QMS-2024-CN-001".
Issue Date	No	Date	
Expiry Date	No	Date	Must be on or after the issue date.
Comments	No	Text area	Any additional notes.
Certificate Document	No	File upload	PDF, PNG or JPG, etc

Quality & Compliance Certifications

Select the standard category first, then pick the specific certification from the list. Upload the certificate document if available.

< Previous

Continue >

Step 4 — a certification card with Standard Type = Quality and the Certification dropdown open.

Step 5 — Review & Create

The review screen summarises the group, the first unit, the contacts and the certifications. Each block has an Edit button that jumps back to the matching step so you can correct anything.

5. Check every block.

6. If something is wrong, click the relevant Edit button, fix it, and return to Review.
7. Click Create Supplier Master. The button shows “Creating Supplier Master...” while it works.

NOTE — If something is invalid

If the server rejects a field, the wizard jumps back to the step containing the problem and lists the specific errors at the top, so you can see exactly what to fix.

test iatf name KEMET

After this master is created, assign the unit to a site, then record the initial unit evaluation scorecard. Supplier qualification is owned at unit level, while site relations keep the owner and scope for each assigned site.

Back

Review And Edit Details

Create Supplier Master

Step 5 — Review screen with the Supplier Group, First Unit and Contacts & Certifications summary cards.

After creation — the success screen

Once the master is created you see a confirmation screen with the new group code and unit code, a “You can now...” checklist, and two buttons:

Option	Required	Type	What it does
Continue to Site Assignment	—	Button	Opens the Unit & Site workspace to assign the unit to an Avocarbon plant (see 1.2).
Create Another Supplier	—	Button	Clears the form to start a new supplier master.

LIFECYCLE PHASE 1 COMPLETE

Supplier Master Created

Kemet Test Group and its first unit are now saved. The next step is to assign the unit to at least one Avocarbon site, then record the unit qualification and scorecard.

SUPPLIER GROUP

Kemet Test Group

GRP-000547

FIRST UNIT

UNT-000663

Supplier code: Kemet UN1 A

You can now:

- Assign this unit to an Avocarbon site.
- Set the relation owner and scope.
- Record the initial unit evaluation after the first site assignment.
- Add another unit for the same supplier group.

Continue to Site Assignment

Create Another Supplier

The

“Supplier Master Created” success screen with its two action buttons.

1.2 Group Management (SB9)

This is the home of every supplier that already exists. From here you can search suppliers, open a supplier to view or edit it, activate or deactivate it, and open its Unit & Site workspace to manage units and plant assignments.

Opening the page

8. In the sidebar, open Supplier Lifecycle and click Group Management (SB9).

The supplier grid

Suppliers are shown as cards. Each card shows the group name, its code, its scope badge (Global / Local), the owner, and how many units it has. Controls above the grid:

Control	Required	Type	What it does
Active / Deactivated tabs	—	Tabs	Switch between active suppliers and deactivated ones.
Search	—	Text	Filter by name, code or type as you type.
Scope filter	—	Dropdown	All scopes / Global / Local.
Clear	—	Button	Appears when a filter is active; resets search and scope.

TIP — Your filters are remembered

The search text, scope and tab you choose are saved for you. If you leave the page and come back (or reload), your last filters are restored automatically.

Viewing and editing a supplier — the detail drawer

Click any card to open a slide-over drawer on the right with the supplier's details.

9. Click Edit group to change the Scope and the Global supplier owner, then Save changes. When scope is Global, a global owner is required.
10. Use Deactivate / Activate to change the supplier's status (see the warning below).
11. Click Open unit & site workspace at the bottom to manage units and plant assignments.

IMPORTANT — Deactivating cascades

Deactivating a group also deactivates all of its units and, in turn, every one of those units' site relations with plants. They stop appearing in supplier pickers across the app. Reactivating a group brings back the group and its units, but site relations must be reactivated one by one. The cascade cannot be limited to part of the group.

The Unit & Site workspace

This two-panel workspace is where you manage a supplier's units (left) and the plants each unit is assigned to (right). The header shows quick counts: Units, Relations and Grade.

The Unit & Site workspace: Supplier Units panel on the left, plant relations panel on the right.

Left panel — Supplier Units

- Active / Deactivated tabs and a search box filter the unit list.
- Click a unit to select it; its plant relations load on the right.
- Add Unit opens the create-unit form (below).
- Each unit can be deactivated/activated; a confirmation dialog explains the cascade to its relations.

Adding a unit (Add Unit)

The Add Unit form appears inline. Only Unit Name is mandatory. It has three parts:

12. Unit details — the same location, commodity, classification and sustainability fields as the onboarding wizard's Unit step (see 1.1, Step 3), plus optional unit contacts.
13. Reuse an existing contact — optionally link a contact already registered in the group or another unit.
14. Certifications — optional, same fields as the wizard's certification step.

Click Create Unit to save.

Right panel — plant relations

With a unit selected, the right panel lists the Avocarbon plants that unit is assigned to. Each relation card shows the unit → plant link, scope/grade/status badges, and details such as owner, annual spend, evaluation dates and panel decision. Per-relation action buttons:

Button	Required	Type	What it does
Add / Update Evaluation	—	Button	Opens the relation evaluation scorecard.
Development Plan	—	Button	Opens the supplier development plan workflow for this relation.
Relation Details	—	Button	Opens a read-only details window (see below).
Override Status	—	Button	Manually set the supplier status with a reason and date.
Deactivate / Activate Relation	—	Button	Turns this specific plant relation on or off (with confirmation).

Assigning a unit to a plant (Assign to Plant)

Click Assign to Plant to open a short wizard with these steps: Group → Unit → Plant → Contact → Owner & Spend → Review.

Step	Required	Type	What you do
Group	—	Confirm	Confirms which supplier group you are working in.
Unit	Yes	Select	Choose the unit to assign (pre-selected if you came from a unit).
Plant	Yes	Select	Choose the Avocarbon plant.
Contact	Yes	Select / add	Choose the responsible contact, or add a new one (Full Name and Email required).
Owner & Spend	Owner: yes	Fields	Optional plant alias; Supplier Owner (required, picked from the purchaser directory); optional annual spend (fiscal year, amount, currency).
Review	—	Confirm	Review the summary and click Create Relation.

NOTE — Scope follows the group

The relation's scope is taken from the supplier group's scope automatically — there is no scope selector in this wizard.

Relation Details window

The Relation Details window is read-only (except the Annual Spend tab) and has five tabs:

Tab	What it shows
Overview	Status, grade, class and open-plan counts, plus the full relation and evaluation summary and comments.
Criteria	The decision criteria, scoring criteria and any evidence attached to the evaluation.
History	The status-change history (who changed what, and when).
Development Plans	All development plans for the relation, with due dates and overdue flags.
Annual Spend	The spend history per fiscal year. This tab lets you add, update or delete spend entries.

The Relation Details window open on the Overview tab.

Overriding the supplier status

Override Status lets an authorized user set the supplier status manually. Both a status and a reason are required, along with the date of the change. Use this only when the calculated status needs to be corrected or updated and always record a clear reason — it is kept in the status history.

The Override Status dialog with the status, reason and date fields.

2 Supplier Portfolio

The Portfolio group on the sidebar shows suppliers that already exist in the system. It has three pages: the Supplier Panel (SB1), Supplier Monitoring, and Development Plans (SB22).

NOTE — Who can change what

Most Portfolio pages are viewable by everyone. Sensitive actions (deactivating relations, overriding status, sending suppliers to committee) are limited to Purchasing Director and VP Conversion, and VP Conversion for committee steps. Users with the Viewer role see everything in read-only mode.

2.1 Supplier Panel (SB1)

This is the default landing page (the application opens here). It lists every active supplier–site delivery relationship across all plants, scopes and families.

Opening the page

15. In the sidebar, open Portfolio and click Supplier Panel (SB1) or simply open the application which lands here.

The Supplier Panel (SB1) table with the Filters card and the tab bar (All Relations / On panel / Needs committee / Deactivated).

Reading the table

Each row is one supplier-unit → plant relationship. Columns:

Column	Required	Type	What it shows
Supplier Unit	—	Column	Unit name/alias, unit code and the parent group.
Site	—	Column	Avocarbon plant, with city/country.

Scope / Status	—	Column	Global scope pill and the supplier status (green = can be awarded, amber = restricted, red = on hold).
Family / Sub-family / Product line	—	Column	The unit's product taxonomy.
Grade	—	Column	Final grade tile (e.g. A1), color-coded.
Strategic	—	Column	Strategic / Directed / Monopolistic / None.
Last Eval / Dev Plan	—	Column	Date of last evaluation; development-plan status if one exists.

Finding a supplier

- Use the tabs — All Relations, on panel, Needs committee (admins only), Deactivated — to narrow the list.
- Use the Filters card: search by name/code/site, and filter by Status, Grade, Plant, Scope, Family, Sub-family, Product Line, Alias, Group Name, Unit Name. Click Clear all to reset.

TIP — Filters are remembered

Your filters and tab are saved per user and restored when you return or reload.

Actions on a relation

Click a row (or View) to open the detail drawer, which shows grade/class/score tiles, supplier and location details, evaluation summary, development plan and committee review, plus an Open Evaluation button. Row buttons (depending on your role):

Action	Who	Type	What it does
View	All	Button	Opens the detail drawer.
Override Status	VP Conversion	Button	Manually set the supplier status (New Status + required Reason).
Deactivate / Activate	Purch. Director / VP Conv.	Button	Removes the relation from the panel, public directory and opportunity tracking, or restores it (with confirmation).
Send to Committee	VP Conversion	Button	For relations needing executive-committee agreement — opens the committee workflow (see below).

Committee validation (executive committee agreement)

When a relation's panel decision is “needs executive committee agreement”, VP Conversion sends it to a committee of six roles (Purchasing VP, Quality Manager, Supply Chain Manager, Operation Manager, Financial Controller, R&D Manager). Each member receives a secure email link to vote Approve / Reject with optional suggestions.

16. Click Send to Committee, fill in each member's name and email (blank rows are skipped), and send.
17. Track responses in the Committee Validation window (progress bar, per-member decisions).
18. Once everyone has responded, VP Conversion clicks Make Final Decision to approve or reject.

2.2 Supplier Monitoring

This page highlights suppliers with missing or risky data, so gaps can be fixed before they cause problems. A health gauge at the top shows the share of units that are complete.

Opening the page

19. In the sidebar, open Portfolio and click Supplier Monitoring.

How to use it

20. Choose a scope tab: By relation or by unit.
21. Click one or more check tiles (e.g. No supplier owner, never evaluated, Overdue evaluation, on hold, no quality cert) to filter the list to those gaps. Selected tiles combine as an OR filter.
22. Refine with the Search box and the Country / Commodity / Group dropdowns.
23. In the results table, use the row links — Unit (opens the group's workspace) and Eval (opens the evaluation) — to fix the gap.

NOTE — What the tiles mean

Each tile counts either relations or units (depending on the tab) that are missing a specific piece of data. High-severity checks (no owner, never evaluated, overdue, on hold) are the priority.

2.3 Development Plans (SB22)

A supplier development plan is an improvement plan opened when a supplier's evaluation reaches a Red (on hold) status. This page tracks every plan from the first request to the committee's final decision.

Opening the page

24. In the sidebar, open Portfolio and click Development Plans (SB22).

Layout

- Five KPI tiles: Total Plans, Needs Action, In Progress, Overdue, Escalated.
- Status tabs: All Plans, Needs Action, In Progress, Closed.
- A filter bar (Plant, Supplier, Supplier Owner, Grade, Hold, Escalated) and a search box.
- A register table showing supplier · plant, grade, plan & status, key dates and documents.

The plan workflow (four steps)

Each plan moves through a fixed sequence. The button on each row shows the next action for that plan's current status:

Button	When	Type	What it does
Send Request	Step 1	Action	Email the supplier to request the plan; set the Due Date and choose recipients.
Mark Received	Step 2	Action	Record the submission date and upload the supplier's action plan documents.
Submit for Review	Step 3	Action	Send to the committee (Plant Manager / Quality / Logistics) with a review deadline.
Record Decision	Step 4	Action	Approve or reject the plan (a rejection reason is required).
Request Revision	After reject	Action	Ask the supplier for a revised plan with a new due date.

Other buttons: Remind (chase a sent request), Details (view/edit a plan), and Cancel Plan (Purchasing Director / VP Conversion only).

NOTE — Viewer role

Viewers see only a View button and a read-only details window — they cannot run the workflow.

The Step 2 “Mark Plan as Received” window with the submission date and Plan documents.

3 Evaluations

The Evaluations group covers certification tracking, criteria validity, the batch-evaluation dashboard, and the full relation evaluation scorecard where a supplier is actually scored.

3.1 Certifications Tracker

Tracks the validity, expiry and compliance status of every supplier-unit certification.

Opening the page

25. In the sidebar, open Evaluations and click Certifications Tracker.

Layout and use

- Four KPI tiles — Total, Valid, Expiring ≤ 90 d, Expired — each clickable to filter by that status.
- Filters: Search, Standard (Quality / Environmental / Safety / Energy / Other) and Status; then Apply.
- The table is grouped by supplier unit and shows Standard, Certification, Name/Reference, Valid From/Until Days Left and a Status & document column.

The screenshot shows the 'Certifications Tracker' page in the Supplier Management System. The left sidebar contains navigation links for Supplier Lifecycle, Suppliers, Evaluations (with 'Certifications Tracker' selected), and Purchasing Value. The main content area features a header with the title 'Certifications Tracker' and a subtitle 'All supplier unit certifications — validity, expiry and compliance status.' Below the header is a warning banner about 128 expired quality certifications. Four KPI tiles are displayed: Total (552), Valid (361), Expiring ≤ 90 d (24), and Expired (128). A search and filter section allows filtering by supplier, cert type, or name, and by standard and status. The main table lists certifications grouped by supplier unit: 3M Technical Ceramics, A.G.P. SAS, and ABC rubber. Each row shows the standard, certification number, name/reference, valid from, valid until, days left, and status (Valid or Expired) with a document link and edit icon.

STANDARD	CERTIFICATION	NAME / REFERENCE	VALID FROM	VALID UNTIL	DAYS LEFT	STATUS & ACTIONS
3M Technical Ceramics 1 certification						
Quality	IATF 16949:2016	IATF 16949:2016	—	10 sept. 2027	409d	Valid cf Ecertificate - TS 744125.pdf
A.G.P. SAS 1 certification						
Quality	ISO9001	ISO9001	—	08 sept. 2028	773d	Valid cf ISO 9001-ENG-C652587...
ABC rubber 1 certification						
Quality	IATF 16949:2016	IATF 16949:2016	—	25 déc. 2026	150d	Valid —

The Certifications Tracker with its KPI tiles and the grouped certifications table.

Editing a certification (privileged roles)

Purchasing Director and VP Conversion can click the pencil on a row to open an inline editor: Standard Type, Certification, Name/Reference, Valid from/until, Comments, and a document Attach/Replace/Upload control. Click Save.

IMPORTANT — Quality certificates affect scoring

Updating a quality certification automatically recomputes the class evaluation for all of that unit's relations. An expired quality certificate lowers the score — the page warns you and links to the Criteria Validity Tracker to reset affected criteria.

3.2 Criteria Validity Tracker

Scans the supporting documents behind every relation's class criteria (payment terms, LTA, SQMA, quality certification, insurance, etc.), shows which are expired or expiring, and lets privileged users reset expired criteria in bulk.

Opening the page

26. In the sidebar, open Evaluations and click Criteria Validity Tracker.

How to use it

27. Review the KPI tiles: Active relations, Relations scanned, Expired criteria, Expiring ≤ 90 days.
28. Use the Expired / Expiring / All chips and the Group by (Supplier / Criterion) toggle to focus.
29. Open a criterion's Open link to jump to that relation's evaluation.
30. Purchasing Director / VP Conversion can click Reset all expired to clear expired criteria to “None” — a confirmation is required, and every reset is logged.

The Criteria Validity Tracker grouped by supplier, with the status chips and the “Reset all expired” button.

3.3 Evaluation Scorecards

This page tracks evaluation deadlines and lets privileged users upload evaluation results in bulk from an Excel file.

Opening the page

31. In the sidebar, open Evaluations and click Evaluation Scorecards.

Dashboard tab

- Five clickable summary cards — Overdue, Never evaluated, Missing date, Due soon, Up to date.

- A table of relations with urgency, unit, plant, current grade, status, frequency, last evaluated and next due.
- A Notify button emails owners about overdue / due-soon / never-evaluated relations.

The Evaluation Scorecards dashboard with the five summary cards and the deadline table.

Batch Upload tab (Purchasing Director / VP Conversion only)

Download a pre-filled template (all active relations, or due/overdue only), fill in the evaluation date and operational grade (A/B/C/D) for each row, then drop the file back in.

32. Click Validate only to check the file without saving (a dry run).
33. Click Upload & Save to apply the results. A results panel shows processed rows, any new statuses, auto-created development plans, and skipped rows with reasons.

NOTE — Grade to status

The operational grade combined with the class determines the supplier status: green (can quote & be awarded), orange (can quote, not be awarded) or red (new business on hold).

3.4 The Relation Evaluation Scorecard (Add / Update Evaluation)

This is the full workspace where a single supplier relation is scored. You reach it by clicking Add Evaluation / Update Evaluation on a relation (in the SB9 workspace or the Supplier Panel), or the Open Evaluation / Eval links elsewhere.

The header

Shows the supplier and plant, the current final grade (e.g. A1) and the derived status, an evaluation date picker, and a mode badge (initial self-assessment, re-evaluation, or baseline locked).

The five tabs

Tab	What you do
Class Evaluation	Score the 11 class criteria (payment terms, LTA, productivity, quality certification, insurance, competitiveness, SQMA, family/geo coverage, consignment, financial health). Each is a dropdown that maps to a score; the average gives the class (1–4). Quality certification is locked and comes from the unit's certificates.
Operational	Score the 8 operational criteria (0–100): management system, customer communication, development/design, production, quality & audits, sub-contractors, deliveries, environment & ethics. The average gives the grade (A/B/C/D). Once submitted, the operational baseline is permanently locked.
Decision & Impact	Answer 6 impact questions (Major/Minor + or –), set the Strategic Mention (None / Strategic / Monopolistic / Directed) and the required Committee Decision (can be added / needs exec committee / cannot be added).
History & Documents	The full evaluation cycle history, status transitions, and evaluation reference documents.
Certifications	The unit's certifications (privileged users can add/edit/renew here); changes to quality certs recompute the class score.

Update criteria

Criteria	Value	Score
1 Terms of Payments	60 days end of month or +	100
2 Long Term Agreement (LTA)	None/Invalid	0
3 Productivity	less than 1%	30
4 Quality Certification	— None —	—

The Relation Evaluation Scorecard on the Class Evaluation tab, showing the 11 criteria with their dropdowns and scores.

Recording an evaluation — the flow

34. Set the Evaluation date in the header.
35. On Class Evaluation, choose a value for each criterion. Open a criterion to add validity dates, a supporting document and notes.

36. On Operational, enter the 8 scores. Submitting locks this baseline permanently.
37. On Decision & Impact, answer the impact questions, set the strategic mention, and choose the committee decision.
38. Attach the Evaluation File (Excel/PDF) required to submit.
39. Click the submit button. VP Conversion locks/approves directly; other roles Submit for Review, after which VP Conversion approves or rejects.

IMPORTANT — Locking is irreversible

Submitting the operational baseline cannot be undone. Non-privileged users become read-only once the relation leaves draft status. Make sure your scores are correct before submitting.

4 Purchasing Value

The Purchasing Value module tracks savings opportunities from idea to realised saving, across a phase-gate pipeline, and reports on budgets and KPIs. It has six pages.

NOTE — Roles in Purchasing Value

Editors (buyers, managers, owners) can create and edit. Deleting opportunities and closing/creating budgets are limited to Purchasing Director and VP Conversion. Viewers are read-only. Monthly entries can be edited by the relation's conversion owner or a privileged user.

4.1 Opportunities

A visual pipeline (Kanban) of value opportunities from Phase 0 to Phase 4 / Closed.

Opening the page

40. In the sidebar, open Value Mgmt (Purchasing Value) and click Opportunities.

The phase-gate pipeline

Opportunities move left to right through gated phases:

Phase	Required	Type	Meaning
Phase 0	—	Phase	Opportunity study (Purchasing).
Phase 1	—	Phase	Feasibility study (Project Manager).
Phase 2	—	Phase	Execution. (Negotiation-type opportunities skip this phase.)
Phase 3	—	Phase	Deployment — monthly savings are tracked here.
Phase 4	—	Phase	Closure.
Closed	—	Phase	Completed or cancelled.

Each phase ends with a gate: reviewers are emailed for a formal vote, then the gate owner records a Go / No Go / Review decision. A Go advances the opportunity to the next phase.

Creating an opportunity

41. Click New Opportunity.

42. Fill in the form:

Field	Required	Type	Notes
Name *	Yes	Text	The opportunity name.
Type *	Yes	Dropdown	Negotiation, Sourcing, or Technical Productivity. (“Cash” is a filter, not a type — it means the opportunity has a cash impact.)
Mode	No	Dropdown	Standard, or a one-time gain (Bonus for Negotiation, Rework for Technical Productivity).
Saving nature	No	Dropdown	Not classified, Hard (cost reduction) or Soft (cost avoidance).
Avocarbon Plant *	Yes	Dropdown	The plant the saving belongs to.
Initial Pilot (email) *	Yes	Email	The owner who starts the study (defaults to you).
Description	No	Text area	Optional context.

43. Click Create. The opportunity starts in Phase 0.

The Opportunities Kanban board with the phase columns and the New Opportunity button.

Working an opportunity

Click a card to open its detail drawer, which has tabs: Overview, STP Study (or Edit), Gate, Project, Financial, Files and Action Plan. You fill in the financial baseline and (for Sourcing / Technical Productivity) the STP study, run the gates, and — from Phase 3 — record monthly savings on the Financial tab. You can also Duplicate a card, or Delete it (privileged roles only).

4.2 Monthly Follow-up

Where Phase 3 opportunities have their monthly savings recorded — the actual saving, the end-of-year forecast and an outcome, for each month.

Opening the page

44. In the sidebar, open Value Mgmt and click Monthly Follow-up.

Recording a month

45. On the Monthly entry tab, choose the Month (and optionally filter by conversion owner or use Missing only).
46. For each opportunity row, type the Actual saving and the EOY forecast.
47. Choose an Outcome: Continue, Recover (feeds a recovery plan) or Escalate (flags the opportunity).
48. Add a comment if useful, then click Save.

The Year overview tab shows one row per opportunity with a column per month and yearly totals.

NOTE — Who can edit

A row is editable only by its conversion owner or by a privileged user; other users see it greyed out. EOY forecast must be at least the cumulative actual to date.

The Monthly Follow-up entry grid with the Actual, EOY forecast and Outcome columns.

4.3 Budgeting

Per-fiscal-year budgeting: decide which qualifying opportunities are “Budgeted”, track baseline vs additional, and formally close the year.

Opening the page

49. In the sidebar, open Value Mgmt and click Budgeting, then pick the Fiscal Year.

KPI cards

- Initial Baseline Budget, Additional (post-closure), Total Budget (Saving), Total Budget (Cash) and Value of Opportunity for the year.

Creating and closing a budget (Purchasing Director / VP Conversion)

- Click Create Budget. For each baseline opportunity choose Not considered, Budgeted, or Additional.
- Click Save Budget and confirm — this saves the decisions but does not yet close the year.
- When ready, click Close Budget <year> and confirm. Budgeted rows are locked; later qualifying opportunities appear as Additional. This is irreversible.

IMPORTANT — Closing locks the baseline

Once a fiscal year's budget is closed, the baseline cannot be changed. New opportunities that qualify afterwards are tracked separately as “Additional”.

The Budgeting page in create mode, showing the per-opportunity Decision selectors and the KPI cards.

4.4 Recovery Plans

A central list of every recovery action — created whenever a monthly outcome is set to “Recover”.

Opening the page

53. In the sidebar, open Value Mgmt and click Recovery Plans.

Layout and use

- KPI tiles: Total plans, Overdue, In Progress, Total to Recover.
- Filter by status (Active / All / Planned / In Progress / Done), Plant and Follower. Overdue plans are shown first.
- Each card shows the opportunity, amounts (delta, amount to recover, actual, EOY forecast), a progress bar and the target date.

Updating a plan

54. On a card (status not Done, and you are not a viewer), click Update.

55. Set the Status (Planned / In Progress / Done), an optional Target date, Amount to recover and a Note.

56. Click Save.

4.5 KPIs

The executive Value Management dashboard: monthly savings, performance by plant / type / buyer, forecast vs budget, and alerts. This page is read-only.

Opening the page

57. In the sidebar, open Value Mgmt and click KPIs, then pick the fiscal year.

What it shows

- An executive summary bar (EOY forecast, actual YTD, EOY vs budget, active alerts, monthly coverage, on-time pacing).
- Execution and pipeline scorecards, plus secondary KPI cards.
- Tabs: Monthly Savings, By Plant, Top 10 Suppliers, By Type, By Nature, By Buyer and Alerts.
- Global filter pills (Plants, Categories, Buyers) that apply across the dashboard.

4.6 Action Plans

Cross-opportunity tracking of every action item — open, closed or blocked — grouped by the person responsible, with reminders, escalations and evidence files.

Opening the page

58. In the sidebar, open Value Mgmt and click Action Plans.

Layout and use

- KPI tiles: Total, Open, Blocked, Overdue.
- Switch between Cards (grouped by person) and Table views.
- Filter by Status, Person and Opportunity.

Managing an action (managers / responsible person)

59. Change the status with the dropdown (→ Open / Closed / Blocked). Closing requires an implementation date.
60. Use Remind to email the responsible person, or Escalate to send it to a manager (To, Subject, optional Message).
61. Attach evidence files; closed actions freeze their evidence.

NOTE — Viewer role

Viewers see statuses and files read-only and cannot change status, remind, escalate or upload.

5 Administration & Approvals

These pages are for approvers only. The Administration section appears in the sidebar only for approver roles (Purchasing Manager, VP Conversion, Purchasing Director, Supplier Owner).

5.1 Account Requests

Where new user account requests are reviewed. Access is limited to VP Conversion.

Opening the page

62. In the sidebar, under Administration, click Account Requests (a badge shows how many are pending).

Approving or rejecting

63. Use the tabs — Pending, Approved, Rejected, All — to find requests.

64. On a pending request click Approve or Reject. You may add an optional message/reason.

65. Click Confirm. Approved users receive an activation email; rejected users are notified.

The screenshot shows the 'Account Management' page in a web application. The page has a dark sidebar on the left with various icons. The main content area has a header 'Account Management' with a subtitle 'Review registration requests and manage existing user accounts and their access roles.' Below the header are three tabs: 'Requests' (selected), 'All Users', and 'Roles & Permissions'. Under the 'Requests' tab, there are four sub-tabs: 'Pending' (selected), 'Approved', 'Rejected', and 'All'. A table displays the pending requests. The table has columns: NAME, EMAIL, REQUESTED ROLE, STATUS, DATE, and ACTIONS. There is one row for 'Allan Riegel' with email 'allan.riegel@avocarbon.com', role 'Viewer', status 'Pending' (indicated by a yellow badge), and date '23 juil. 2026'. The ACTIONS column for this row contains two buttons: 'Approve' (green) and 'Reject' (red). Below the table, there is a caption: 'The Account Requests table with the Pending tab and the Approve / Reject controls.'

NAME	EMAIL	REQUESTED ROLE	STATUS	DATE	ACTIONS
Allan Riegel	allan.riegel@avocarbon.com	Viewer	Pending	23 juil. 2026	<button>Approve</button> <button>Reject</button>

5.2 Relation Review Queue

Supplier relations submitted for VP Conversion approval before they join the panel. Everyone with an approver role can open the page, but only VP Conversion sees the Approve / Reject controls.

Opening the page

66. In the sidebar, under Administration, click Relation Review.

Reviewing a relation

67. Open a card to see the supplier, plant and owner. Use View Evaluation or Manage Supplier to inspect it.

68. VP Conversion: click Approve (optional comment) or Reject (a reason is required), then Confirm.

5.3 Supplier Validation Queue

New suppliers awaiting approval before they are added to the panel. Access is limited to VP Conversion. There is no sidebar link — it is reached by direct URL (/pending-validation).

Approving or rejecting a supplier

69. Open a supplier card to see its country, site, scope and owner.
70. Click Approve (optional comment) or Reject (a reason is required), then confirm.

Appendix A — Getting Started & Access

How to sign in and manage your account. These screens appear before you reach the application.

A.1 Signing in

71. Go to the application address and you will see the Sign In screen.
72. Enter your Work Email and Password.
73. Click Enter workspace. If you have forgotten your password, click Forgot password?

A.2 Requesting an account

If you do not have an account, click Request access on the sign-in screen.

- 74. Enter your Work Email and Full Name, and choose your Requested Role (Purchasing Manager, Supplier Owner, Plant Manager, Quality Manager, or Viewer).
- 75. Click Submit request. A Purchasing Manager / VP Conversion reviews it; you are emailed when it is approved.

A.3 Resetting your password

- 76. On the sign-in screen click Forgot password? and enter your work email.
- 77. Enter the 6-digit code emailed to you (it expires in 15 minutes).
- 78. Set and confirm a new password (at least 8 characters), then sign in.

A.4 Activating your account

When your account is approved you receive an activation email with a link. Open it, set and confirm your password (at least 8 characters), and click Activate account. You can then sign in.
